

What's Eating Your Collection?

Korynetes sp

Adult beetle

Size: 5mm

Shape: traditional beetle shape

Colour: metallic blue

Antennae: long with loose club

Distinguishing features: metallic blue but with dark hairs, distinct waist between thorax and abdomen.

Korynetes species are predators and both the adults and larvae will eat the larvae of Furniture beetles and Deathwatch beetles. When these insects are found, it is a sure sign that there is an active woodborer infestation.
